ORIENTATION

The System at a Glance

Ten instruments, one thread. Each section that follows documents a single tool — its purpose, its route, and how to work it.

§01	Getting Started	Sign in, connect your WhatsApp account, sync templates.	/settings
§02	Inbox	Every conversation in one two-way thread.	/inbox
§03	Contacts	The register of people, tags and custom fields.	/contacts
§04	Pipelines	Deals on a board, moved by hand through stages.	/pipelines
§05	Broadcasts	One approved template, sent to many recipients.	/broadcasts
§06	Automations	Trigger-driven rules that act without you.	/automations
§07	Flows	Self-running conversations — beta.	/flows
§08	Settings	Profile, WhatsApp, templates, tags, appearance.	/settings
§09	Reference	Error codex and glossary for the field.	—

01

FIRST CONTACT

Getting Started

A few steps connect your WhatsApp Business account and bring the CRM to life. Work them in order.

ROUTE /SETTINGS?TAB=WHATSAPP · **SOURCE** META · **TOKEN** ENCRYPTED

01 Sign in

Log in with your email and password. First time here? Create your account on the sign-up screen.

02 Connect WhatsApp

Settings → WhatsApp: enter your **Phone Number ID**, **WABA ID**, **Permanent Access Token**, and a **Verify Token** from Meta. Save — your token is stored securely and reused on later edits.

03 Set the webhook

Copy the callback URL shown in Settings into Meta, match the verify token, and subscribe to `messages`. This is what delivers replies and read receipts back to you.

04 Sync templates

Your Meta-approved templates pull in automatically on connect, ready to use in the Inbox and Broadcasts.

05 You're live

Reply from the Inbox, add contacts, run a broadcast, and build your pipeline.

FIG. 01 — CONNECTION ORDER

ENCRYPTED

02

THE THREAD

Inbox

Every inbound and outbound message, gathered into a single live conversation per contact.

ROUTE /INBOX · REALTIME YES · MEDIA PROXIED

01

Send & receive

Text, image, video, document, audio, and location — inbound and outbound — all render in the thread as they arrive.

02

Templates in chat

Open the template picker to send an approved template mid-conversation. It carries the correct language automatically.

03

Reactions & replies

React with an emoji, or swipe-reply to quote an earlier message. Reactions are stored apart from the message log.

04

Signals

Unread badges track the conversation list; delivery ticks advance sent → delivered → read as the webhook reports.

A CONVERSATION OPENS AUTOMATICALLY ON FIRST INBOUND MESSAGE.

03

THE REGISTER

Contacts

The people the system knows — each a record you can tag, extend, and trace across every other instrument.

ROUTE /CONTACTS · **PHONE** E.164 · **IMPORT** CSV

01 Create & edit

Add a contact with name, phone, email, and company. Store phone in full E.164 — for India, 91 + ten digits. A malformed number fails to reach WhatsApp.

02 Import in bulk

Upload a CSV and map its columns to fields. Rows arrive as contacts ready for tagging and broadcast.

03 Tags

Attach tags to segment audiences. Broadcasts and automations can target a tag directly.

04 Custom fields

Define your own fields for data the standard record omits. These become mappable variables in broadcast personalization.

05 Detail view

Open a contact to see notes, linked deals, and full history in one place.

FIELDS

name · phone · email · company
+ custom fields

INDEXED

04

THE BOARD

Pipelines

Deals as cards, dragged by hand from stage to stage — with the value of the whole board read back to you in rupees.

ROUTE /PIPELINES · CURRENCY INR · VIEW KANBAN

01 Move deals

Drag a card between columns to advance it. Stages are yours to name and order.

02 The deal form

Record title, value, contact, stage, and owner. Value is entered in **INR**; the whole app settles in rupees.

03 Analytics

Pipeline value, average deal size, and a weighted expected value — each open deal's worth times its stage probability. Lost deals are excluded.

04 Win & loss

Mark deals won or lost; the board re-derives its totals and the monthly won / lost counts on its own.

05

THE FAN-OUT

Broadcasts

One approved template, personalized per recipient and sent at scale — then tracked as each message is delivered and read.

ROUTE /BROADCASTS/NEW · **STEPS** TEMPLATE → PERSONALIZE → AUDIENCE → SEND

01 Choose a template

Pick an approved template. The list auto-syncs from Meta on connect and refreshes when stale — no manual sync for the common case.

02 Personalize

Drag a contact field, custom field, or static value onto each `{{n}}` slot. Every placeholder must be mapped before you continue.

03 Audience & schedule

Select recipients by tag or list; send now or schedule. Messages fan out in batches with per-recipient results.

04 Track delivery

The detail page shows sent / delivered / read / replied per recipient — populated by the webhook.

⚠ FIELD CAUTION — ERROR #132012

The number of values you send must match the template's `{{n}}` variables at Meta exactly. If the stored copy has drifted, sync it (Settings → Templates → Sync) before sending, or Meta will reject the parameter format.

PREVIEW

`{{N}}` → VALUE

06

THE RULE Automations

Trigger-driven sequences that act on your behalf—sending, tagging, waiting, and branching without a hand on the wheel.

ROUTE /AUTOMATIONS · ENGINE STEPS · CRON WAITS

01 Set a trigger

An event starts the rule — an inbound message, a new contact, a tag applied. One trigger opens each automation.

02 Chain steps

Add steps in sequence: send a message, apply a tag, wait a duration, or branch on a condition.

03 Activate safely

Activation is validated — an incomplete configuration cannot go live, so a half-built rule never runs.

04 Wait steps & cron

Delays are drained by a scheduled pinger. Set the cron secret so paused executions resume on time.

05 Logs & reuse

Every run is logged per automation. Duplicate an existing rule to reuse its shape.

FIG. 06 — RULE CHAIN

07

THE SELF-RUNNING CONVERSATION · BETA

Flows

A conversation drawn as a graph of nodes — menus, buttons, and questions that walk each contact through on their own.

ROUTE / FLOWS · NODES MENU · BUTTONS · INPUT · CONDITION · HANDOFF

01 Build on the canvas

Lay out nodes and connect them. The engine auto-advances through send and condition nodes, and pauses at buttons, lists, and input.

02 Start from a template

Three prebuilt flows — welcome menu, FAQ bot, and lead capture — give you a working graph to adapt.

03 One run per contact

Each contact holds a single active run. Replies route by their button or list id; unmatched replies follow the fallback policy.

04 Activate & observe

Publish a flow, then watch executions in its runs history to see where contacts land.

FLOWS DISPATCH BEFORE AUTOMATIONS ON EACH INBOUND MESSAGE.

FIG. 07 — NODE GRAPH

B

08

THE INSTRUMENT PANEL

Settings & Templates

Where the system is tuned — your identity, your WhatsApp connection, and the template catalog kept true to Meta.

ROUTE /SETTINGS · **TABS** PROFILE · WHATSAPP · TEMPLATES · TAGS · APPEARANCE

01 Profile & security

Edit your name and avatar, change your password, and review active sessions.

02 WhatsApp

Enter and test Meta credentials. The access token is stored encrypted and reused — re-enter it only to rotate.

03 Templates

Meta is the source of truth. **Sync** pulls approved templates into the catalog; it runs on connect and when the copy is stale.

04 Header type

For templates you intend to broadcast from the app, keep **Header = None** — media headers are not yet sent.

05 Tags & appearance

Manage the tag vocabulary and switch the theme to taste.

FIG. 08 — SYNC LOOP

META ↔ DB

09

THE CODEX Reference

The signals you may meet in the field, and the words behind them — read a symptom, apply the remedy.

SYMPTOM	MEANING	WHAT TO DO
No templates shown	Catalog is empty.	Add your <code>WABA ID</code> in Settings → WhatsApp, then press Sync. Only Meta-approved templates appear.
"Not Connected"	WhatsApp not linked.	Re-enter your credentials in Settings → WhatsApp and use <code>Test Connection</code> .
#132012	Wrong variable count.	The values you sent don't match the template's <code>{{n}}</code> at Meta. Sync the template, remap, and resend.
#132001	Template not on Meta.	The name or language isn't approved at Meta. Check both, or press Sync.
Can't save template	Invalid header type.	Set Header to <code>None</code> , or a valid type (text · image · video · document).
Sent, never delivered	Number or webhook.	Confirm the contact's number is full <code>E.164</code> , and that the webhook is set up (§01).

WABA ID

WhatsApp Business Account ID — required to sync templates. Distinct from the Phone Number ID.

TEMPLATE

A pre-approved message form. Created and approved at Meta; cached locally.

PHONE NUMBER ID

Meta's identifier for the sending number. Used on every send.

E.164

Full international phone format — country code plus number, no symbols. India: 91 + ten digits.
